Rendering quality used to be the bane of the post-production process for photographers. It was so difficult to export any image that wasn't only 'perfect', that it wasn't even worth doing it. Photographers preferred to wait until the printing process, use Photoshop's Image > Adjustments > Adjust Hue, Saturation, and Lightness (HSL) or Burn to only burn in the details instead of fire up Photoshop. With Photoshop CC 2015 Beta, now using 'Layer Mask' will bring the 'burn-in' effect live when looking through the Photoshop interface. If you've been burning in details with adjustment layers, burn-in can be a real boon, so this could be a life changer if you haven't been using it. As a more complex layer sits in the layer stack, it will start to block out other layer's images. One of the unique features of Photoshop CC 2015 is that when you color correct a layer, you can also color correct the background layer and render it with the same settings as the background. Another feature added to Photoshop CC is the ability to set how close one image layer needs to be to another. Previously, one only had the option of 'None', 'Above', 'Above and Below', or 'Below'. 'Above' was the only type of layer offset in the newer versions of Photoshop. Now, you can set layers to 'Top', 'Bottom', 'Both', 'Neither', or 'All'. I also love new types of light. And that's exactly what Lightroom 5 brings to the table. Color and Lighting controls allow you to boost or darken shadows, highlights, midtones, and shadows in a photo—or even the entire image. Subtle increases in contrast are easily accomplished by sliders and tabs,

and you can even employ the Decontaminate tool to increase contrast in tricky spots. The best part is that you can curve and adjust the settings of exposure, sharpening, saturation, shadows, highlights, midtones, and black-and-white.

With this you can then create realistic styles that mimic your camera's image and then you can further edit the rear-facing image. Why not be more than just a “digital camera to phone” solution and instead be a real DAW? This usually means that you can adjust the aspect ratio and crop the image down to a square, but just crop it if you like. There are no other features of lightroom in the phone, but there are features that cover many of the important aspects of a phone, like all the way volume control. Often in phones, you use only a part of it, as for example, the speaker or the earpiece, If you are among those who wish to see the overall of the end result, you can crop it to the size you prefer. Users can select a face, place a stripe over the face and then move the selection using the tools. The new way of working in the program loses the selected image, so the mask can not be applied to the entire image. The data exchange with the mobile device stores the images in the cloud or the device and stores the optional data in the device itself. Move the slide to adjust the ratio -- this is how you can adjust the crop tool. The tool on the left is for dithering. When you open an image, many areas automatically have a slight color noise added. By selecting Noise Reduction from the Effect menu, you can

adjust the apparent amount of noise in any image. When the class of a layer is set to 'Picture' that means it is a clipping layer. The instant feedback is an acrylic glass tool that lets the user modify the Design view instantly. It is one of the most popular and admired film editing tools. With this Photoshop, the title of the best image-editing app in the universe lies beside Illustrator, Pixelmator, and in fact, Photoshop itself. Though it is a bit pricey, but the proprietary features are continuously working on by the experts that are nothing but brilliant. The features of Photoshop are in a way to make a masterpiece out of even the most humble scrap of imagination. It might be impossible to accomplish it on your own, but using a correct software like Photoshop can get you out of many critical situations. **Object Selection** - It is the most fundamental and the first step towards image alteration, whereby you can bring the homogenous shapes and objects into your image and further meddle with. It takes care of a particular instance of characters present in the respective angle of the screen. In most of the instances, this tool must be used in combination with other devices like channel, marquee, lasso, etc. **Layer Mask** - It is an extension of the past, wherein you can be the judge to reality. But when it comes to editing, the layer mask is a blessing. It's a one-way affair that works, whereby you can erase all the unnecessary information from the document. It is a bit tricky to handle but immensely helpful in working with layers. **Channel tools** - It is the most helpful tool to differentiate the colors and shades present in your tones. It can be used on the layers present in the image and if it is the case, the channel will be automatically created. Generally, it's created by the type of the object or layers present in the image. However, you can delete any of the layers from their respective position.
