If you're worried about trusting Adobe, you'll need to give seriously thought as to which tablet you'll buy first. Although I still have a discrete desktop workflow to fall back on and use when needed, when I am creating a single image or two in the same dedicated work area, I don't feel I need to have a desktop. That freedom is a deal-breaker. The one small catch, of course, is the performance issues that we still see. But it's not the end of the world because it can be fixed and in fact a lot of these (and other) problems no longer exist in Photoshop CS6. Feature-wise, I find myself wanting more of the software. Zoom is a must-have and it works wonderfully for those who still use a DSLR. I will never go back to a single optical focal ratio, even though I realize that it works for portraits and other less complicated subjects. It's just too limiting. And while I can't wholeheartedly endorse the AI edits, on the whole, you won't find anything in this program that you can't do in other applications. Again, produce something like this and you are now opening yourself to a whole world of new possibilities with all kinds of new tools. The iOS version of Adobe Photoshop CC and Adobe Lightroom CC are going to both be worth every penny in the long run, it no doubt. Adobe Photoshop Sketch and Lightroom have been relegated to a parallel device (at least for the time being), which is why it's very important to note that the iPad Pro and Apple Pencil come with a dedicated set of hardware that just doesn't exist with any other tablets. So, while the software is disappointing in some ways, it would be a step backwards to return to the almost crippled previous hardware that we had to use when tablets first came out. This is definitely the best tablet and stylus combination I have ever experienced and one that I am sorry to see go.
