How Photoshop Came to the Web: Photoshop is an incredibly complex piece of software, and it has taken tremendous effort by the Adobe team to make it capable of running in the browser - there's a great case study to that effect here. The team is committed to open architecture and had been compelled to deliver all of their design tools as open source, just as they did for the web - even the team's new digital art platform, Adobe XD.**How Photoshop Came to the Web:** It would have been impossible for Adobe to have launched Photoshop in the browser without the web tools that they've built. Not to mention the fact that Photoshop is one of the most complex software experiences on the web today. Adobe was already planning on "open architecture" when they decided to move to HTML5, so we can imagine that Photoshop would not have been possible with the web offerings at the time. But, Adobe felt that web tools are necessary to deliver the richness of Adobe XD's programmatic design system, and the improvements that have been made to the web stack in the last 3 years have made delivering a web app possible.**How Photoshop Came to the Web:** Chrome's first party support of WebAssembly is at the tip of Adobe's web tool iceberg. They used it to port Photoshop to the web and ship version of it for public beta. The fact that they were able to do so in three years is amazing.**How Photoshop Came to the Web:** Photoshop Camera allows Photoshop users to instantly share and collaborate, in real time. We've been excited by the idea of letting people work in the browser without a limitation imposed by desktops or laptops and we're excited to be able to give people the ultimate creative experience right in their smartphone. e3d0a04c9c
